

Appendix 5 ADMS 3.1 model results

Figure A5.1 Annual mean sulphur dioxide at the rates shown in Table 3. Model predictions used Wyton 1994 meteorological data. The contour interval is 2 $\mu\text{g}/\text{m}^3$.

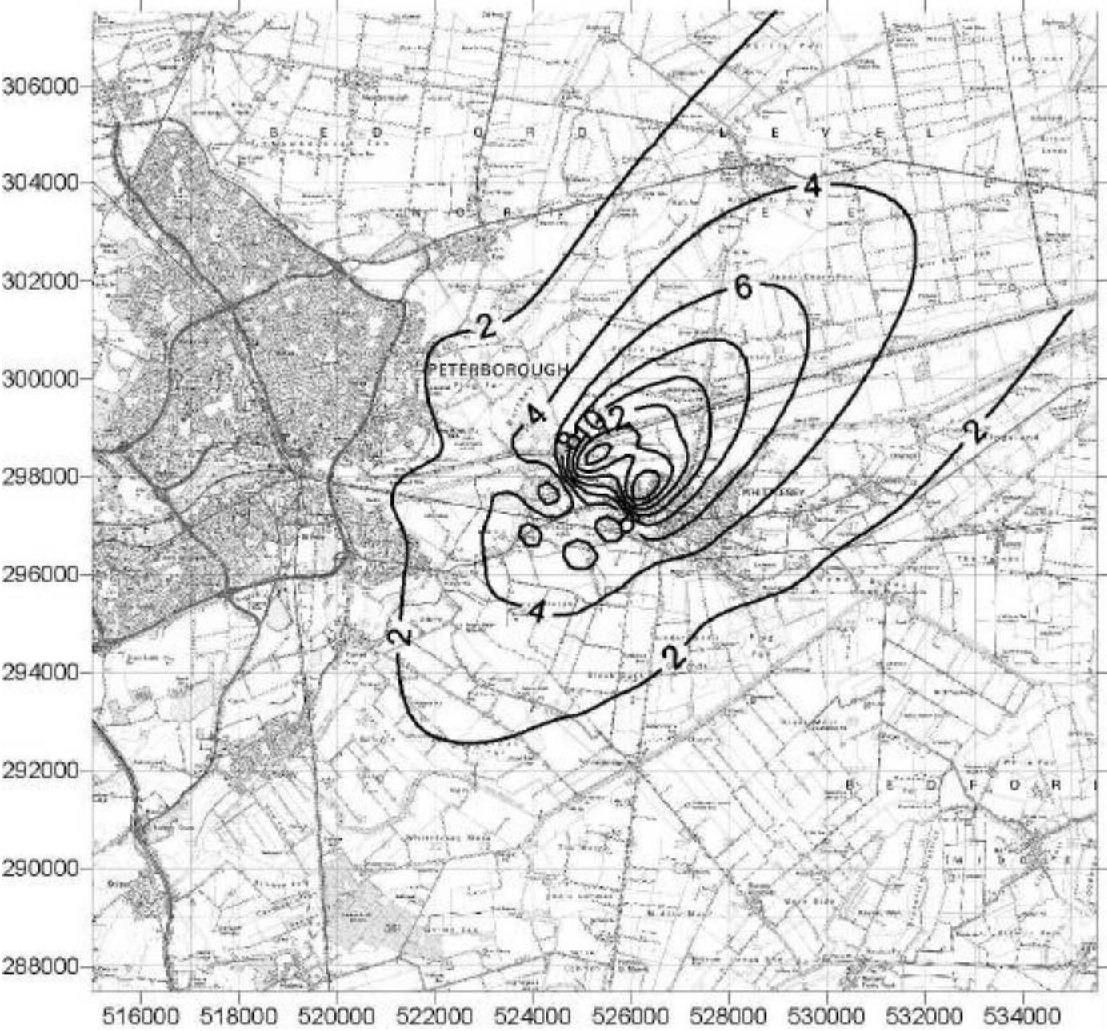

Figure A5.2 99.9th percentile of 15 minute mean sulphur dioxide at the rates shown in Table 4. Model predictions used Wyton 1994 meteorological data. The contour interval is 50 $\mu\text{g}/\text{m}^3$, and the 266 $\mu\text{g}/\text{m}^3$ contour is shown in red.

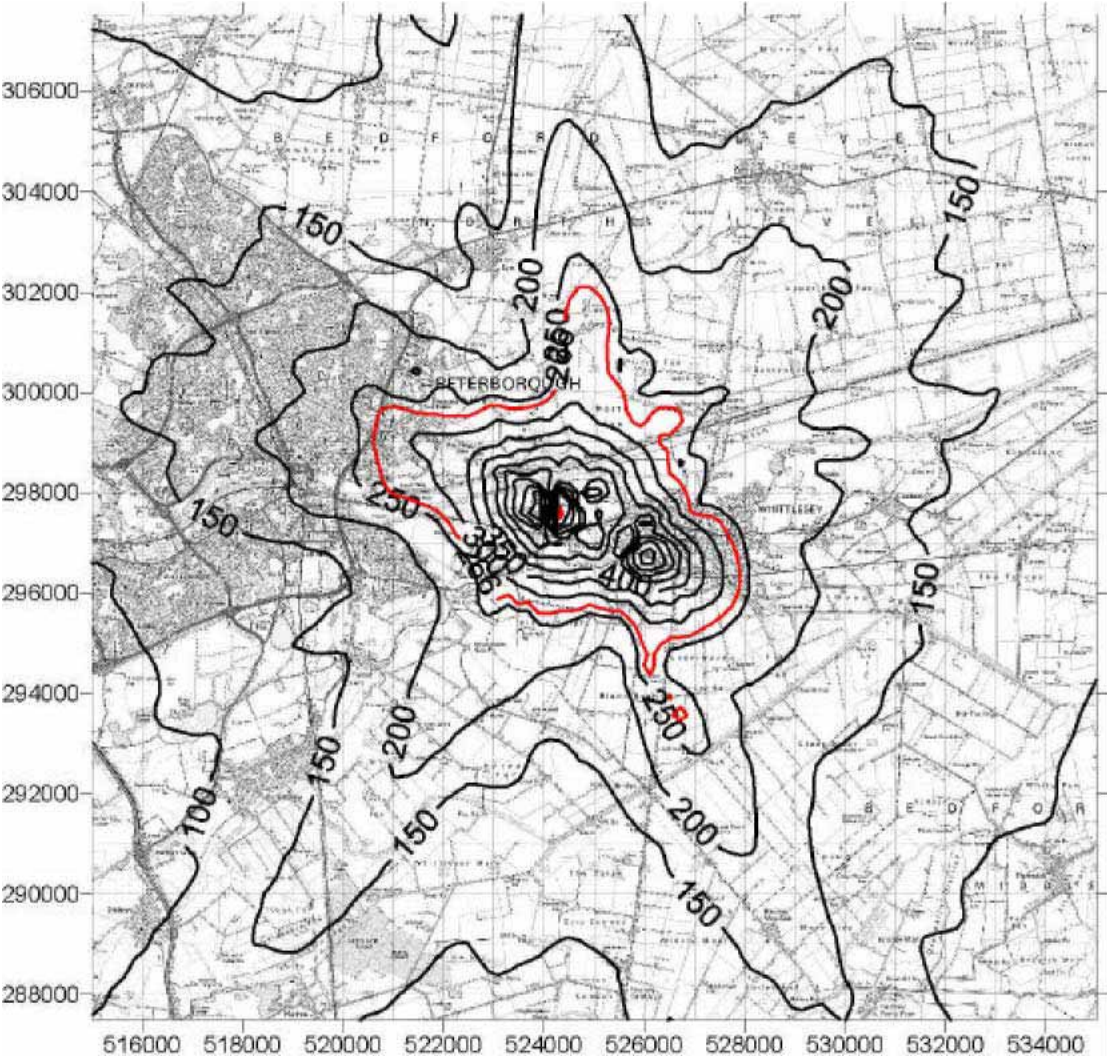

Figure A5.3 99.73th percentile of 1 hour mean sulphur dioxide at the rates shown in Table 4. Model predictions used Wyton 1994 meteorological data. The contour interval is 50 $\mu\text{g}/\text{m}^3$, and the 350 $\mu\text{g}/\text{m}^3$ contour is shown in red.

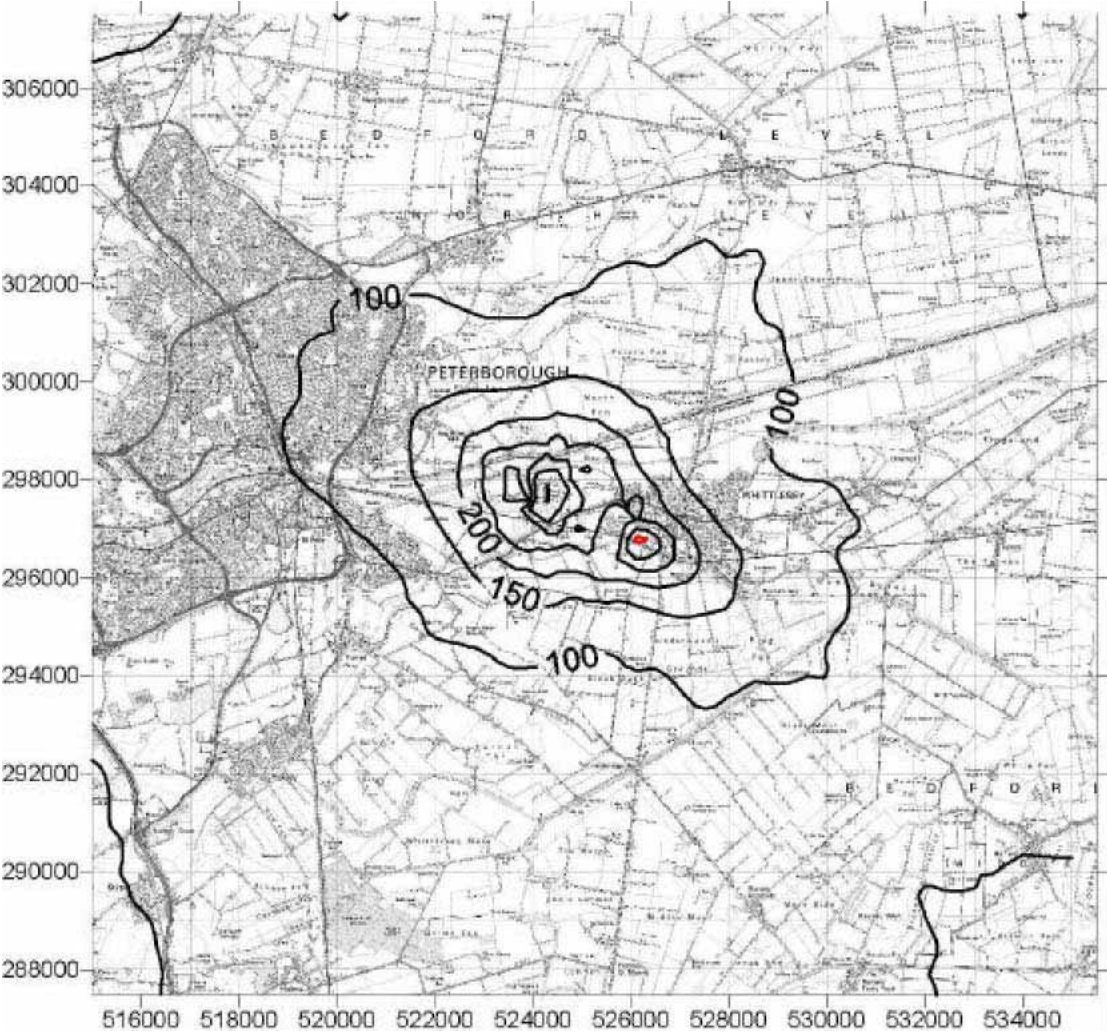

Figure A5.4 99.18th percentile of daily mean sulphur dioxide for constant emissions from all three stacks at the rates shown in Table 3. Model predictions used Wyton 1994 meteorological data. The contour interval is 10 $\mu\text{g}/\text{m}^3$.
